EXAMINER'S RESPONSE

Status of Application.

1. In response to the applicant's amendment received on 4/20/00. The examiner has considered the new presentation of claims and applicant arguments in view of the disclosure and the present state of the prior art. And it is the examiner's position that claims 13-49,61-69 are unpatentable for the reasons set forth in this office action:

ART REJECTION

- 2. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
 - 3. Claims 13-15,20,28-30,43-45,48,49,60,61-65,69 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Busch (5408513).

Busch shows a financial transaction device 110 connected to a wireless adaptor 112 to convert data to a different format. Busch also shows a first wireless modem 124 which sends data over a wireless media (antenna on element 124). The data is received at a "host" which includes another (or second modem) and first communication means to communicate to a computer and authorization processor. The adaptor includes an audio frequency modem 126 as claimed.

4. Claims 16-27,31-42,46,47 are rejected under 35 U.S.C. § 103 as being

5

10

15

5

10

15

20

unpatentable over Busch as applied to claims 13,28,43 above, and further in view of common knowledge in the art. The examiner takes official notice that the devices claimed (claims 16,17,31,32,46,47) are well known devices equivalent to the devices taught by Rogge. The examiner takes official notice that the networks claimed (claims 19-27,34-42) are well know networks equivalent to the networks taught by Rogge. Furthermore, the extent of disclosure the applicant provides is evidence of the fact that the applicant believes that the types of network (or types of device) are known to the artisan. The applicant has not invented these specific networks (or devices). Regarding claims 18,33, the references, discussed above, discloses the claimed invention except for having the claimed elements in a single computer system. It would have been obvious to one having ordinary skill in the art at the time the invention was made to place all these elements in a single computer, since it has been held that forming in one piece an article which has formerly been formed in two pieces and put together involves only routine skill in the art. Howard v. Detroit Stove Works, 150 U.S. Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to have utilized any of the claimed networks (or devices) in the above modified system since that would have been equivalents to the elements used in the above modified system.

5. Claims 66-68 are rejected under 35 U.S.C. 103(a) as being unpatentable over Busch as applied to claims 13,18,28 above, and further in view of Buffered.

5

10

15

20

In an analogous art, Buffered discloses a method and apparatus for transmitting communication information for wireless systems that includes a data compression circuit to compress digital data where the communication processor compresses digital dat to the wireless modem via the transmission media and communication means. Buffered further discloses a data encryption circuit to encrypt digital data and the processor encrypts digital data to the wireless modem via the transmission media and communication means. Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to have utilized a compression and encryption circuit(s) for providing secure communication of financial data between the transaction device and the host in the above modified system.

REMARKS

It is noted that new claim 69 includes limitations that have been previously claimed. As claimed prior to the preliminary amendment, the first wireless modem is coupled to the wireless adapter and the wireless adapter includes an audio frequency modem. Therefore, the audio frequency modem is coupled to the first wireless modem.

This is a CPA of applicant's earlier Application. All claims are drawn to the same invention claimed in the earlier application and could have been finally rejected on the grounds and art of record in the next Office action if they had been entered in the earlier application. Accordingly, **THIS ACTION IS MADE FINAL** even though it is a first

5

10

action in this case. See MPEP § 706.07(b). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no, however, event will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

CONTACT INFORMATION

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Brian Zimmerman whose telephone number is (703) 305-4796.

Any inquiry of a general nature or relating to the status of this application should be directed to the Group receptionist whose telephone number is (703) 305-3900.
